© 2026 ONCHYRA Foundation. All Rights Reserved.

Legal Disclaimer & Risk Warning

IMPORTANT REGULATORY & COMPLIANCE NOTICE

PLEASE REVIEW THIS ENTIRE SECTION CAREFULLY. ENGAGEMENT WITH DIGITAL ASSETS, MINING NETWORKS, AND ALGORITHMIC EMISSIONS CONSTITUTES HIGH FINANCIAL AND TECHNOLOGICAL RISK. NO PORTION OF THIS WHITEPAPER REPRESENTS INVESTMENT, LEGAL, OR REGULATORY ADVICE.

1. Information Scope Only

This whitepaper (the “Whitepaper”) is compiled and presented by the ONCHYRA community to define the system’s operational architecture, token distribution rules, and technological trajectory. It does not constitute a prospectus, an security offering, or a financial solicitation. No regulatory agency has evaluated or validated the specifications presented herein.

2. Decentralized & Community-Driven Nature

ONCHYRA operates as a decentralized, community-first ecosystem. All participation—including the activation of booster packages, referral network building, and the utilization of the native \$ONC utility token—is strictly voluntary. Users carry full financial, technical, and regulatory liability for their actions on-chain.

3. Digital Asset and Market Volatility

Cryptographic assets (such as \$ONC) are subject to immense market volatility. Their pricing, utility valuations, and overall liquidity can fluctuate radically in response to external macroeconomic trends, regulatory shifts, and structural developments. Participants should never allocate funds or capital they cannot afford to lose entirely.

4. Absence of Forward-Looking Warranties

While the roadmap and parameters are formulated based on strict architectural math, ONCHYRA delivers no formal guarantee that future utility, dApp integrations, listing cycles, or platform expansions will proceed precisely as planned. Features may adapt dynamically based on network requirements and smart-contract protocol development.

Executive Summary

A New Paradigm for Web3 Engagement

ONCHYRA is a premium community-centric digital network designed to lower the access barriers of Web3 asset distribution. Historically, decentralized mining and early tokens have been reserved for institutional capital or highly complex technical operators. ONCHYRA democratizes this landscape, introducing an intuitive, highly structured mining framework backed by clear programmatic guardrails.

THE FIVE CRITICAL CORNERSTONES OF ONCHYRA

1. **High-Velocity Multiplier Mining:** Yielding rewards scaled on active proof-of-activity.
2. **Algorithmic Deflation:** 10% transactional peer-to-peer (P2P) burn mechanism.
3. **Dual-Currency Referral Network:** Commissions paid in stable \$USDT, registration bonuses in \$ONC.
4. **Rigid Economic Guardrail (10× Cap):** Preventing token inflation and keeping the ecosystem balanced.
5. **Structured Global Leadership:** A performance-based matrix to empower regional network hubs.

The 2-Minute Summary

Through a low entry limit starting at \$5, users globally activate custom ****Booster Tiers**** to simulation-mine \$ONC tokens via daily 24-hour claim interactions. Active participants can scale their rewards by building a multi-level team network, which pays out commissions in stable \$USDT. High-performing coordinators access the Leadership Matrix, securing daily stablecoin pool yields. This ensures immediate financial viability while driving the long-term adoption of the native \$ONC token utility.

Industry Challenges

The Web3 space has matured, yet mass distribution systems continue to face fundamental design challenges that prevent sustained engagement.

CRITICAL DEFECTS IN CONTEMPORARY SYSTEMS

The industry struggles with systemic structural flaws that undermine trust, security, and sustainability.

1. The Speculative Volatility Void

Traditional utility projects rely heavily on marketing hype. In the absence of early gamified systems and accessible entry portals, user engagement experiences immediate drop-offs once promotional campaigns conclude.

2. Unchecked Inflationary Mechanics

Most token distribution systems lack strict economic guardrails. Free emissions and massive VC pre-allocations dilute market supply rapidly, causing heavy selling pressure that leaves early community advocates with devalued assets.

3. Fragile Community Architecture

While projects are quick to speak on community values, very few provide clear, programmatically guaranteed rewards for local network organizers. Regional leaders are often left without structural compensation or clear tools to scale their operations.

4. Missing Real-World Integration

Tokens are frequently deployed as isolated trading instruments with no integration into external utility marketplaces, micro-task ecosystems, or functional exchange mechanics.

The ONCHYRA Solution

ONCHYRA addresses these core industry issues by introducing a balanced, sustainable system architecture.

Strategic Axis	Speculative Meme Projects	ONCHYRA Architecture
Capital Entry Requirement	High barriers / unpredictable gas	Highly accessible \$5 entry limit
Distribution Protocol	Pre-sales and VC allocations	Active fair-distribution mining engine
Systemic Safety Cap	None; unlimited exit dumps	Strict 10× Earning Cap to protect liquidity
Emission Balancing	Hyper-inflationary mechanics	Automated 10% peer-to-peer burn fee
Leadership Sourcing	Centralized, manual payouts	Automated, programmatic Leadership Matrix

Table 1: System Comparison Matrix

Architectural Advantages

- **Dynamic Cap Control:** The 10× cap forces active reinvestment, driving constant liquidity back into the platform.
- **Deflation-Driven Supply:** Transaction volumes directly fuel token scarcity via an on-chain burning mechanism.
- **Dual Reward Streams:** Participants earn stablecoin income for referral activities while accumulating long-term native token utility through mining.

Ecosystem Overview

The ONCHYRA ecosystem is engineered as a self-sustaining loop where value generation, community growth, and utility execution feed into one another.

Functional Ecosystem Flow

This structural loop ensures that as the community scales, referral volume fuels \$USDT liquidity, which in turn secures the network. Mining activity increases transactional velocity, which activates the automated burn contract to drive token scarcity and protect the value of the \$ONC token.

What is the \$ONC Token?

TECHNICAL SPECIFICATIONS OF \$ONC

- **Asset Standard:** Multichain Native Architecture (BEP20 & Polygon Support)
- **Circulation Mode:** Community mining emission, non-inflationary
- **Transfer Dynamics:** Decentralized P2P enabled with integrated burn
- **Primary Purpose:** Fueling marketplace trades, community voting, and utility dApps

Systemic Value Drivers

The \$ONC token is built to resist market volatility by focusing on structural utility rather than speculation. Mining activities distribute tokens directly to active community members, while on-chain transactions apply constant deflationary pressure to reduce circulating supply. \$ONC provides holders with access to exclusive platform features, voting rights on community initiatives, and native currency utility within our dApp ecosystem.

Tokenomics

The ONCHYRA network features a fixed-supply, deflationary asset design engineered to support long-term sustainability.

CORE TOKEN INFORMATION

- **Total Supply:** 1,000,000,000 \$ONC (Fixed Cap)
- **Transactional Burn:** 10% Burn on P2P Transfers
- **Emission Engine:** Deflationary Supply Mechanism
- **Architecture Utility:** Utility Driven Ecosystem

Automated Deflationary Transfer Burn

The on-chain smart contract enforces a 10% transaction burn fee on all peer-to-peer (P2P) transfers of \$ONC tokens:

$$T_{\text{Burned}} = T_{\text{Amount}} \times 0.10$$

$$T_{\text{Recipient}} = T_{\text{Amount}} \times 0.90$$

This mechanism permanently removes tokens from the circulating supply with every transaction, aligning token scarcity with network utility over time.

Evolving System Allocations

Additional token allocation details may be introduced in future ecosystem updates as the ONCHYRA network continues to evolve.

The ONC Mining System

Mining on ONCHYRA is a gamified distribution process designed to reward daily engagement. Users initiate a mining cycle every 24 hours to secure their allocation of \$ONC tokens.

The Mining Claim Formula

The daily distribution for an active account is calculated using a base mining rate and the user's active package multiplier:

$$R_{\text{Daily}} = 0.05 \times M$$

Where:

- R_{Daily} represents the daily amount of \$ONC tokens claimed.
- 0.05 is the protocol's fixed base mining coefficient.
- M is the Multiplier associated with the active Booster Package.

Mining Operations & Rules

Mining cycles run for 24 hours and require active daily check-ins; rewards do not accumulate if a cycle is missed. The mining contract verifies that the account's total earnings remain below the 10× cap before releasing the daily claim.

Booster Packages

Booster Packages allow participants to scale their mining capabilities. These tiers are structured to remain accessible, with packages ranging from entry-level to high-capacity options.

The Mining Multiplier Tier System

Booster Package	Cost (USDT)	Multiplier Factor (M)	Daily Claim Yield (\$ONC)
Starter	\$5	4×	0.20 \$ONC
Builder	\$10	8×	0.40 \$ONC
Pioneer	\$25	15×	0.75 \$ONC
Elite	\$50	30×	1.50 \$ONC
Titan	\$100	60×	3.00 \$ONC
Dominion	\$250	120×	6.00 \$ONC
Legacy	\$500	300×	15.00 \$ONC

Table 2: Official Booster Package Matrix

Ecosystem Scaling Mechanics

The tiered multiplier system allows participants to scale their mining capabilities proportionally. For example, a user with an active ****Titan Package**** (\$100) unlocks a 60×

$$R_{\text{Daily}} = 0.05 \times 60 = 3.00 \text{ \$ONC per day}$$

This systematic design provides predictable, automated token distribution across all participant tiers.

The 10× Earning Cap System

To protect its long-term economy, ONCHYRA implements a strict 10× **Earning Cap** on all active booster packages. This mechanism ensures sustainable liquidity and balanced reward distribution.

THE REVENUE CAPPING FORMULA

Every active package is capped at 10× its original cost. All network activities—including mining claims, referral commissions, matching bonuses, and leadership pools—count toward this limit.

$$\text{Account Earning Limit} = P_{\text{Cost}} \times 10$$

Earning Cap Milestones

- **Starter (\$5 Package):** Maximum Earning Capacity = **\$50**
- **Builder (\$10 Package):** Maximum Earning Capacity = **\$100**
- **Elite (\$50 Package):** Maximum Earning Capacity = **\$500**
- **Legacy (\$500 Package):** Maximum Earning Capacity = **\$5,000**

Ecosystem Protection Mechanics

Once an account reaches its 10× earning cap, further reward payouts pause. To resume earnings, the participant must purchase a new booster package. This mechanism prevents capital stagnation, maintains platform liquidity, and ensures that high earners continue to support the ecosystem.

Referral Rewards

To accelerate global growth, ONCHYRA implements a dual-asset referral reward program. This structure pays sales commissions in stablecoin (\$USDT) while rewarding network building with native tokens (\$ONC).

1. Package Commission Structure (Paid in \$USDT)

When an invited user purchases an active Booster Package, the upline receives immediate commissions paid in stable \$USDT across three referral levels:

- **Level 1 (Direct Referrals):** 10% commission
- **Level 2 (Indirect Referrals):** 5% commission
- **Level 3 (Indirect Referrals):** 3% commission

2. Registration Bonuses (Paid in \$ONC)

To incentivize platform adoption, free account registrations distribute \$ONC tokens from the community reserve:

- **Level 1 (Direct Referrals):** 0.25 \$ONC
- **Level 2 (Indirect Referrals):** 0.10 \$ONC
- **Level 3 (Indirect Referrals):** 0.05 \$ONC

REWARD DISTRIBUTION PROFILE

Referral commissions are calculated programmatically on-chain. Stablecoin commissions (\$USDT) provide immediate returns, while registration bonuses (\$ONC) help distribute the utility token to new users.

The Leadership Program & The 50:50 Rule

The ONCHYRA Leadership Program is designed to reward community organizers who build stable, balanced, and active regional networks.

Operational Balance: The 50:50 Rule

To qualify for leadership ranks, participants must build a balanced network. This is enforced by the ****50:50 Rule****, which prevents users from relying on a single high-performing team member.

THE BALANCED VOLUME FORMULA

No more than 50% of the required qualification volume can come from an account's single strongest referral leg. The remaining 50% must be generated collectively across all other legs.

$$V_{\text{Eligible}} = \min(V_{\text{Strongest}}, 0.50 \times V_{\text{Target}}) + \sum V_{\text{Other}}$$

This structural requirement ensures that leaders build broad, resilient networks rather than relying on the efforts of a single high-performing member.

The Leadership Rank System

Our premium rank ladder offers progressive incentives, including immediate rank bonuses and daily leadership pool shares scaled to custom durations.

Rank Tier	Directs	Team Volume	Weak Leg	Bonus (USDT)	Daily (USDT)	Duration
Ignition	3	\$1,000	\$500	\$25	\$5/day	5 Days
Momentum	5	\$5,000	\$2,500	\$100	\$10/day	10 Days
Velocity	7	\$10,000	\$5,000	\$250	\$20/day	15 Days
Quantum	10	\$25,000	\$12,500	\$500	\$40/day	20 Days
Fusion	12	\$50,000	\$25,000	\$1,000	\$75/day	25 Days
Infinity	15	\$100,000	\$50,000	\$2,500	\$150/day	30 Days
Titan	20	\$250,000	\$125,000	\$5,000	\$300/day	30 Days
Apex	25	\$500,000	\$250,000	\$10,000	\$600/day	30 Days
Zenith	30	\$1,000,000	\$500,000	\$25,000	\$1,250/day	30 Days
Legacy	40	\$2,500,000	\$1,250,000	\$50,000	\$3,000/day	30 Days

Table 3: Ecosystem Leadership Ranks V1.1

Operational Rules for Ranks

- **Accumulation Mode:** Team volumes accumulate continuously and do not reset monthly.
- **Systemic Alignment:** The Daily Reward is distributed up to the duration limit shown in the table, or until the active Earning Cap of the leader's account is reached.
- **Capping Dynamics:** All bonuses and daily rewards count toward the account's active 10× earning cap.

The Matching Bonus System

The **Matching Bonus System** rewards community builders for directly supporting the performance of their Level 1 partners.

Program Parameters

Sponsors earn a ****10% matching bonus**** on the immediate Rank Achievement Bonuses and Daily Leadership Rewards earned by their Level 1 direct referrals.

Matching Bonus Examples

- **Immediate Rank Bonus Match:** When a direct referral qualifies for the ****Ignition**** rank and receives their \$25 bonus, the sponsor earns a \$2.50 USDT match.
- **Daily Leadership Reward Match:** When a direct referral reaches the ****Velocity**** rank and earns their daily \$20 reward, the sponsor receives a \$2.00 USDT daily matching bonus (for up to 15 days).

Deposits & Withdrawals

ONCHYRA provides streamlined, secure payment gateways to process transactions efficiently across our global user base.

DEPOSIT PARAMETERS

- **Minimum Deposit:** \$5.00 USDT
- **Supported Networks:** BNB Chain (USDT BEP20) & Polygon (POL)
- **Processing Fees:** Native network gas fees only (no additional platform charges)

WITHDRAWAL PARAMETERS

- **Minimum Withdrawal:** \$10.00 USDT
- **Processing Fee:** Flat 5% fee
- **Automated Threshold:** Withdrawals under \$50 are processed instantly. Withdrawals over \$50 undergo a manual security review to protect platform liquidity.

Network Gas Requirements

Ecosystem transactions are settled directly on-chain. Users must maintain a small balance of native gas tokens (\$BNB or \$POL) in their connected wallets to process and sign transactions.

Security & Transparency

Ecosystem security and transparency are central to ONCHYRA's long-term sustainability. The platform focuses on establishing a highly resilient user environment.

CURRENT SECURITY FOCUS AREAS

- **Operational Security:** System monitoring and operational reliability protocols.
- **Fraud Monitoring:** Automated network telemetry to scan and track fraudulent configurations.
- **Community Protection:** Safeguarding user experiences and transactional access points.
- **Responsible Growth:** Dynamic economic parameters designed to avoid un-backed inflation.
- **Transparency:** Ledger accountability and accurate platform interface tracking.

Future Security Enhancements

As the ONCHYRA ecosystem continues to scale, we aim to implement advanced network security features, including:

- **Contract Verification:** Comprehensive public smart contract code verification.
- **Multi-Signature Controls:** Integrated Multi-Sig treasury locks for ecosystem assets.
- **Advanced Monitoring Systems:** Smart-contract telemetry scanners.
- **Additional Transparency Features:** Decentralized community validation indicators.

Community & Global Vision

ONCHYRA is designed as a global utility movement, operating across borders to establish a collaborative community network.

Universal Onboarding Strategy

By keeping entry-level mining booster packages highly accessible (\$5 and \$10), ONCHYRA lowers the barrier to entry for participants globally, with a focus on emerging Web3 markets.

Global Community Foundations

The ecosystem is structured to scale into regional hubs, empowering local leaders with educational material and decentralized voting tools as governance transitions toward the community.

System Roadmap

The roadmap outlines our development phases, focusing on security, network stability, and sustainable growth.

PHASE 1 — FOUNDATION (COMPLETED)

- ONCHYRA Platform Launch
- User Registration System
- Mining System Activation
- Referral Reward System
- Booster Packages
- Leadership Program

PHASE 2 — ECOSYSTEM LIVE (CURRENT)

- P2P Transfer System Live
- ONC Internal Economy Active
- Community Expansion
- Global Network Growth
- Reward Distribution System

PHASE 3 — UTILITY EXPANSION

- ONC Marketplace
- Enhanced User Experience
- Additional ONC Utilities
- Community Features
- Ecosystem Enhancements

PHASE 4 — TOKEN DEVELOPMENT

- **ONC Utility Expansion**
- **Strategic Partnerships**
- **Ecosystem Integrations**
- **Adoption Programs**
- **Buyback & Burn Mechanisms**

PHASE 5 — GLOBAL SCALE

- **Worldwide Community Growth**
- **Major Strategic Partnerships**
- **Advanced Web3 Services**
- **Ecosystem Expansion**
- **Long-Term Sustainability**

Future Utilities

To support long-term value, the \$ONC token will integrate with utility applications as the ecosystem scales.

THE SHIFT TO NATIVE UTILITY

as the community scales, \$ONC will transition from a reward token to a functional, native utility asset across multiple integrated applications.

1. The ONCHYRA Utility Marketplace

A decentralized portal where users can exchange goods, virtual assets, and services directly using \$ONC. The 10% P2P burn will apply to marketplace transactions, further reducing token supply.

2. Micro-Tasking and Ecosystem Services

Integrating the mining app with a micro-tasking interface. External partners can post tasks (such as translation, data labeling, or app testing), with payouts settled in \$ONC tokens.

3. Governance and Voting

\$ONC token holders will gain voting rights on key platform decisions, including reward distribution adjustments, marketplace policies, and community pool funding.

4. Cross-Chain Integrations

Expanding \$ONC across multiple blockchain networks to reduce transaction fees, increase processing speeds, and integrate with broader DeFi ecosystems.

Frequently Asked Questions

Q1: What is ONCHYRA?

ONCHYRA is a decentralized, community-driven Web3 platform that provides gamified utility mining, structured referral networks, and long-term utility expansion.

Q2: How does the mining process work?

Mining is an active, daily process. Users select a Booster Package to establish their mining multiplier and log in every 24 hours to claim their daily allocation of \$ONC tokens.

Q3: What is the purpose of the 10x Earning Cap?

The 10× cap is a sustainability mechanism. When an account earns ten times its package value through mining, referral commissions, or leadership bonuses, the package expires. This structure encourages active participation and reinvestment.

Q4: Why is there a 10% burn fee on P2P transfers?

The 10% burn permanently removes \$ONC tokens from circulation during peer-to-peer transfers, creating deflationary pressure as transaction volume grows.

Q5: How are deposits and withdrawals processed?

Deposits start at \$5 and support USDT (BEP20) and POL. Withdrawals require a \$10 minimum and include a 5% processing fee. Withdrawals under \$50 are processed instantly, while larger amounts undergo a manual security review.

Q6: How does the Leadership Program's 50:50 rule work?

To qualify for leadership ranks, no more than 50% of your target team volume can come from your single strongest leg. The remaining 50% must be generated collectively across your other legs.

Conclusion & Ecosystem Targets

ONCHYRA represents a balanced, sustainable approach to Web3 distribution. By combining entry-level mining boosters, a dual-currency reward model, and a robust 10× earning cap, the platform aligns incentives for everyday users, network builders, and long-term holders alike.

We invite you to join us in building a transparent, community-driven digital economy.
